

Kia Ora ,

As the producer of Hunting Aotearoa for 11 years I am endorsing the REXON radio products. We currently have four REXON RL-328 Hand held radio's that we use as part of filming our show.

For the last six/seven years we have operated with the REXON radios and the four years previous to that we used a number of other brands for our communication.

As part of my responsibilities as a Producer I have to ensure that my crew are safe and that we always have a back up plan should something go wrong. Part of a robust emergency strategy is for the crew to have regular and reliable communications with each other. Our experience with various radio brands has given us an idea of how a good hand held radio transmitter should behave.

After four years of frustration with radio performance we tested and purchased two REXON radio's to use in the field. When I say field I am really referring to the wilds of New Zealand. We travel to the most remote and most extreme environments NZ has to offer in all types of conditions. This means that we need radio transmitter's that can match these extremes.

We purchased these radios as part of our search for an effective radio solution and we are pleased to say that the REXON radio's have been the best we have come across. REXON has come on board as a sponsor in the last year only. Previous to that we were using them because they were the best, so my intention is to help anyone looking for a great solution to use REXON and save the hassle, expense and pain of purchasing inferior brands.

These Radio's are the best for us because:

1. They have the best coverage we have experienced especially in our native bush, pine forests, hill country and mountain terrain. I am not saying they work 100% of the time in these types of conditions as no radio can. All radios in this frequency band are designed for line of sight and so anytime you have bush or large hills between you and the other radio you will lose either quality or signal altogether. For us REXON have been by far the best in terms of getting signal where others could not.
2. The battery will last a whole week with out a re-charge. Remember that there are days where we have no need to call using these radios however they

are always kept on. Our experience is that other brands would lose all their charge in generally just one day of being turned on only.

3. They have lasted through all manner of terrible treatment – We have dropped them, stood on them and even got them wet in the rain while out filming and they still go. It's not easy hunting with so much gear so it happens regularly that items are bumped, squashed and dropped about.

I give my full support to Rexon because they have created a truly great radio solution and now they are improving them again with a new level of water proofness that will allow you to submerge it under water without damaging them.
